

Topic 1 Photonics

Subtopic 1.1 and subtopic 1.3 - Optofluidic and Fiber optics distributed Sensors

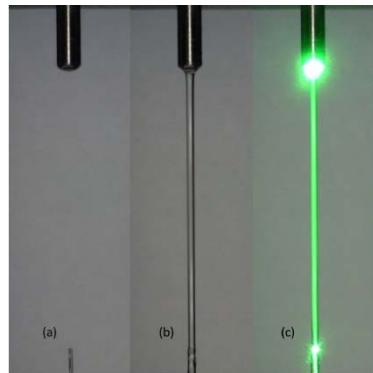

Contact: R. Bernini (bernnini.r@irea.cnr.it)

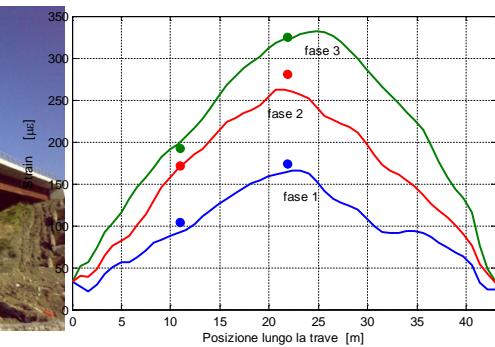

Silicon integrated optofluidic sensors
for fluorescence or label-free analysis

Polymeric microfluidic sensor for molecular
biosensing and single cell counting and analysis

Optofluidic Fluorescence/Raman
spectroscopy platform for on line/real
time liquid analysis and monitoring

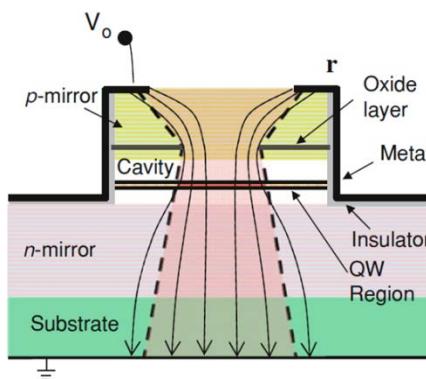

Distributed fiber optic sensors for temperature and/or structural
health monitoring of civil infrastructure or aeronautical structures

Topic 1 Photonics

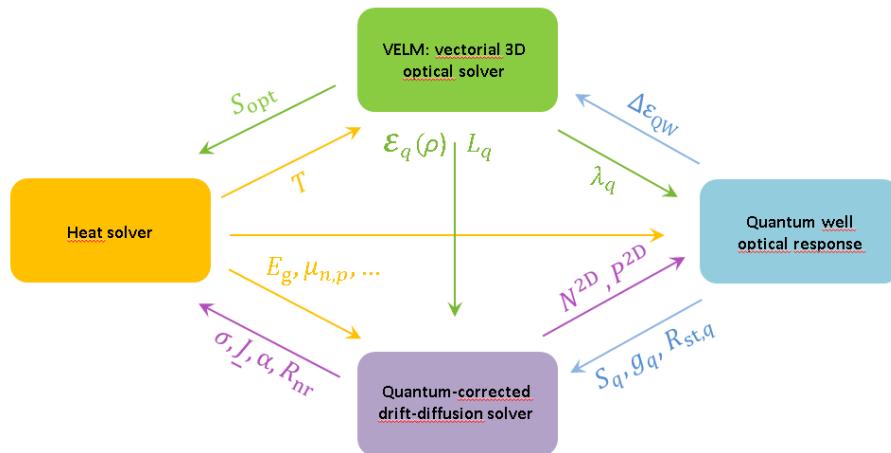

Subtopic 1.2 - Vertical cavity surface emitting lasers (VCSEL)

Contact: Pierluigi Debernardi (pierluigi.debernardi@ieiit.cnr.it)

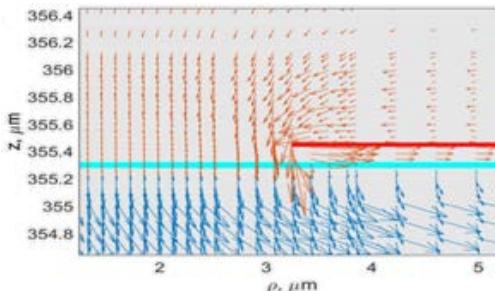

Top view of a VCSEL.

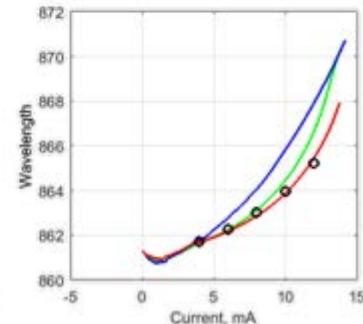

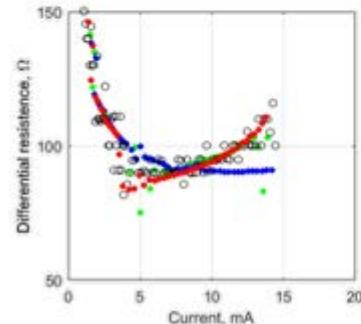

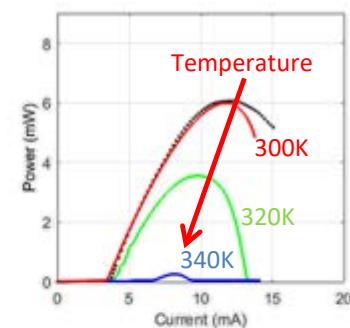

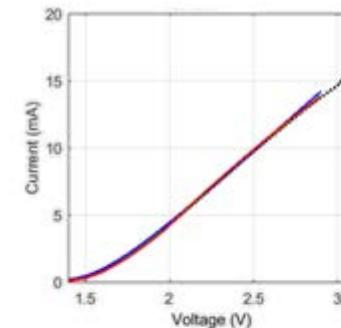

Typical VCSEL schematic

Workflow of our in-house VCSEL Numerical Simulator (VENUS)

Example of simulated current density vector map

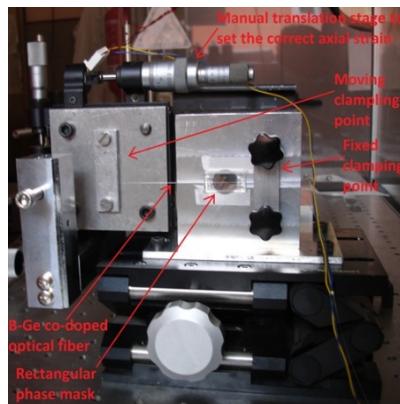

VCSEL Simulation result chart:
 comparison with experiment (dots)

Subtopic 1.4 - Fiber gratings

Contact: Cosimo Trono (c.trono@ifac.cnr.it)

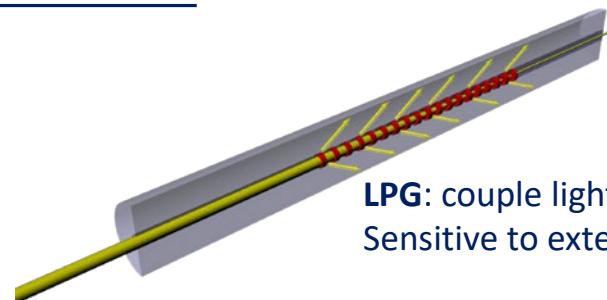

FBG: back-couple light in the core
Sensitive to strain and temperature

FBG writing apparatus:
Excimer source @248 nm
Photosensitive fibers
Phase mask technique

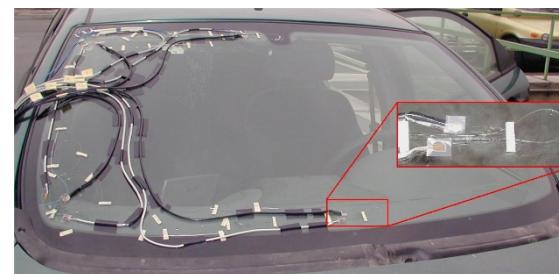

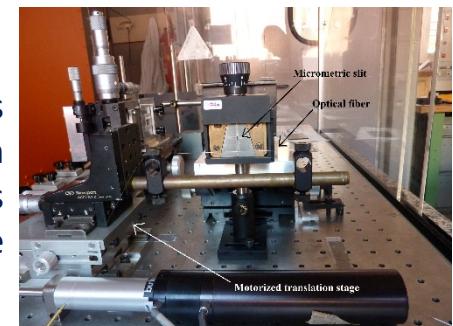

Topic 1 Photonics

LPG: couple light in the clad
Sensitive to external refractive index

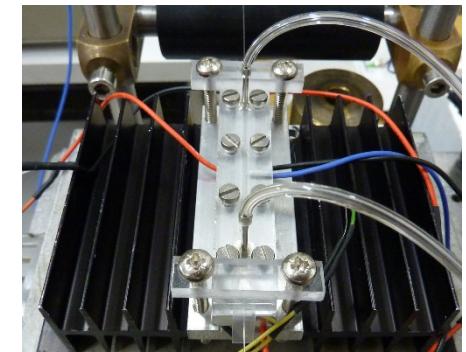

Design and development

LPG writing apparatus
Excimer source @248 nm
Photosensitive fibers
Point by point technique

Examples of applications

FBG
Deformation monitoring
Cars windshield

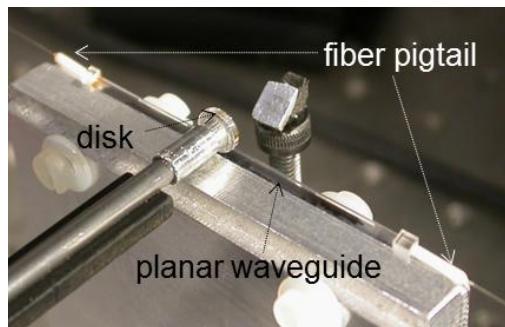

LPG
Label free biosensing

Topic 1 Photonics

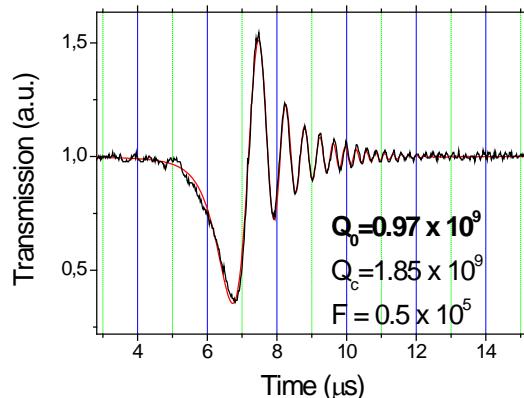

Subtopic 1.6 - High-Q optical micro-resonators

Contact: Gualtiero Nunzi Conti (g.nunziconti@ifac.cnr.it)

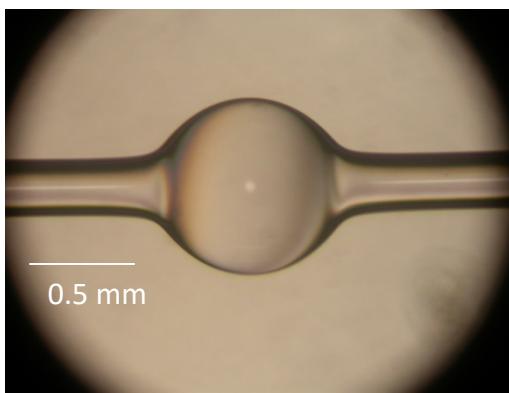

Ultra-high Q optical micro-resonators in crystals for ultra-compact low noise optoelectronic oscillators and frequency combs

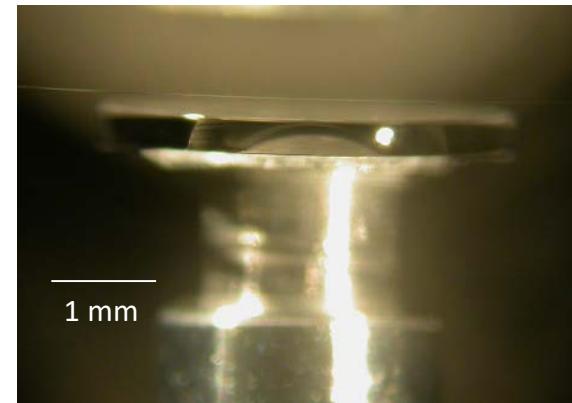

Lithium niobate disk uniquely coupled to a fiber pigtailed lithium niobate waveguide

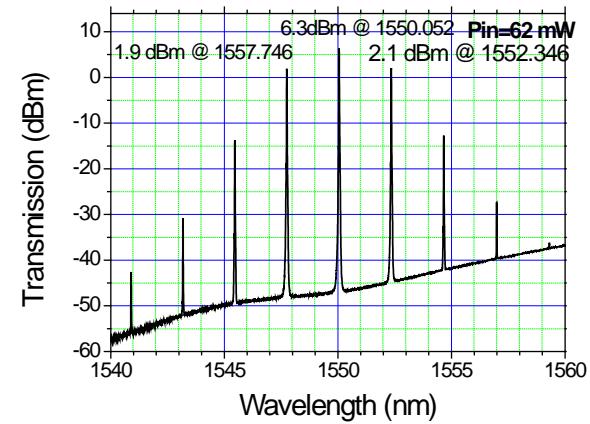

Cavity ringdown measurement showing a Q factor of one billion in a MgF_2 disk

Hollow silica resonators or microbubbles made from silica capillary

MgF_2 disk supporting ultra-high Q Whispering Gallery Modes

Primary comb with separation of 26 FSR obtained from a magnesium fluoride disk

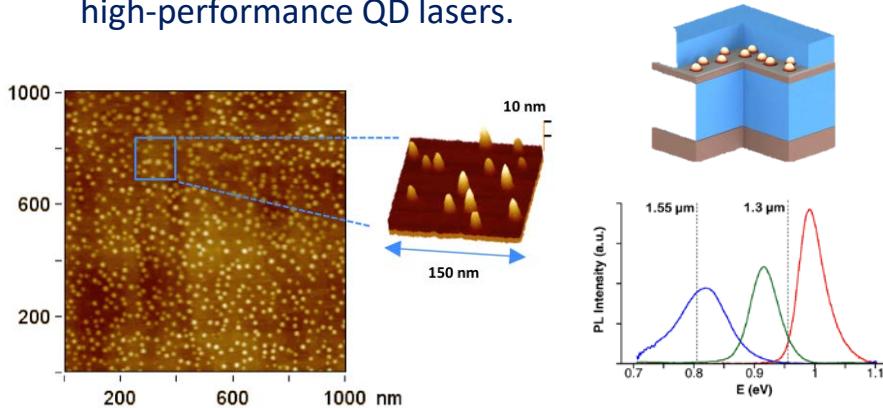

Topic 1 Photonics

Subtopic 1.9 - Quantum Dot nanostructures for photon emission at telecom wavelengths

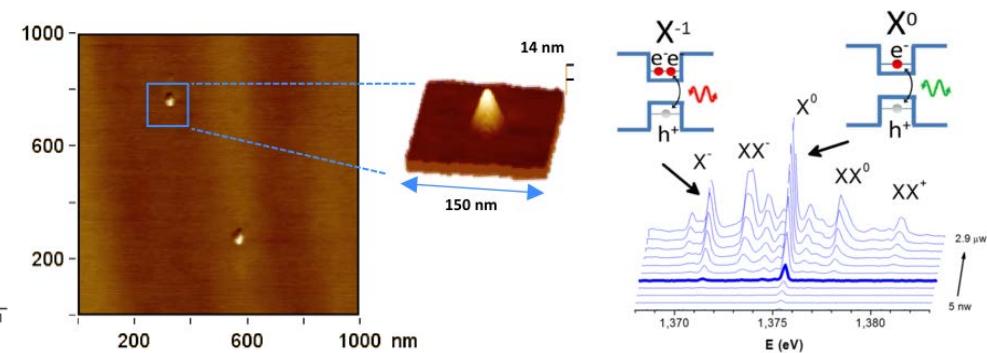

Contact Person: Paola Frigeri (paola.frigeri@imem.cnr.it)

Epitaxial Quantum Dots compact, integrable and efficient photon sources:

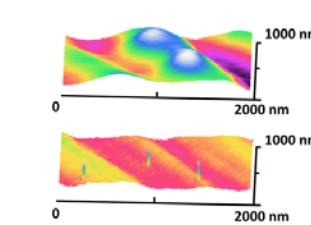

InAs/GaAs-based QDs for high-performance QD lasers.

Metamorphic QD nanostructures: single-photon sources for quantum information technology.

Molecular Beam Epitaxy system for the deposition of III-V semiconductors

Laboratory for Micro- and Nano-Fabrication equipped with a FESEM-FIB

Bottom-up, site-controlled nanostructures.

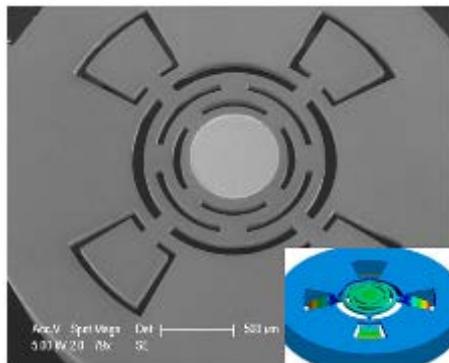

Topic 1 Photonics

Subtopic 1.10 - Micro/nano optomechanical oscillators with low optical and mechanical loss

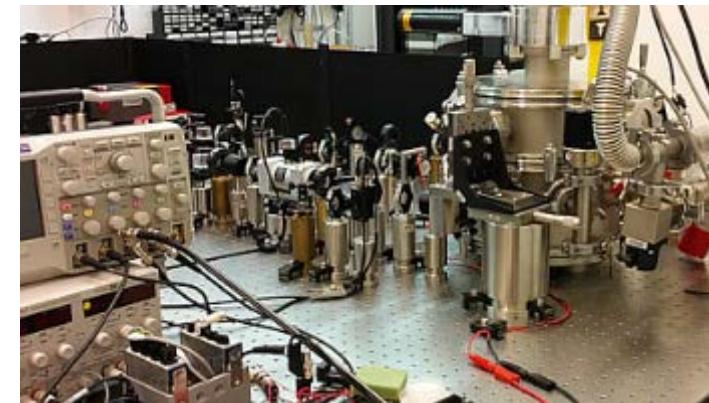

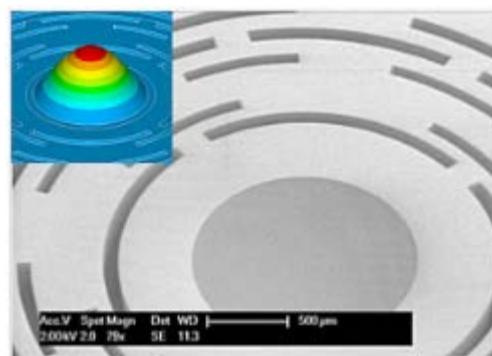

Contact: Michele Bonaldi (mbonaldi@fbk.eu)

MEMS mechanical oscillator for quantum optomechanics

- Silicon based devices -

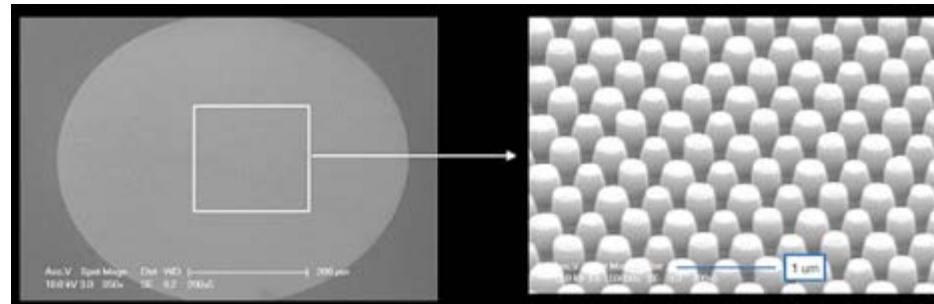

- SiN based devices -

Michelson interferometric setup
for device characterization

Photonic metamaterial to
improve reflectivity of the
oscillator

Project Area 1: Devices and Systems for ICT

Topic 2 Microwave and Millimeter-Wave Technologies and Devices

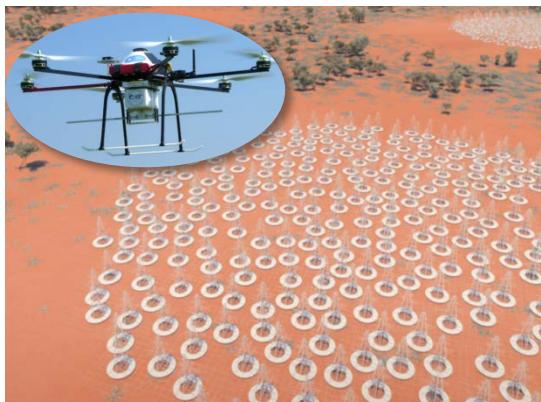

Subtopic 2.1 - Microwave and millimeter-wave passive systems and antennas

Contact persons: G. Virone (giuseppe.virone@ieiit.cnr.it)

Q-band (40-50 GHz)
multi-beam receiver for
astrophysical surveys

Unmanned Aerial Vehicle (UAV)
integrated with Tx sources for
radio-telescope calibration

Microwave/millimeter-wave
laboratory equipped up to
110 GHz

Microwave components
developed by 3D- printing

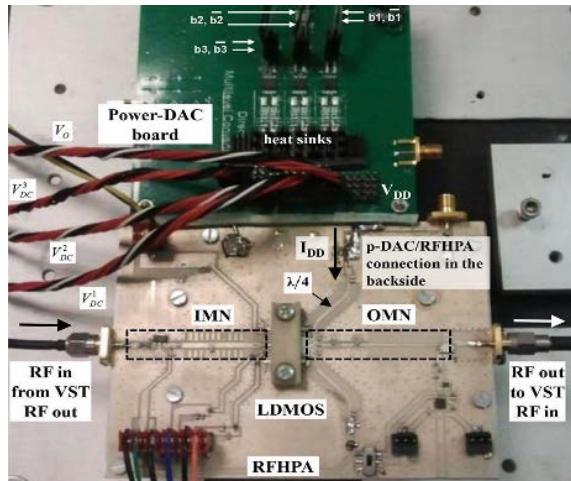

Project Area 1: Devices and Systems for ICT

Topic 2 Microwave and Millimeter-Wave Technologies and Devices

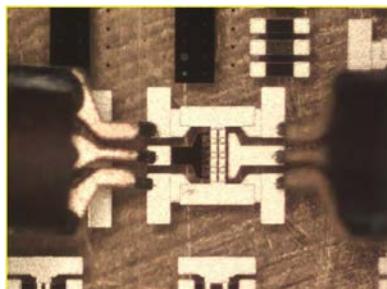

Subtopic 2.2 - Active circuits for wireless-communication systems

Contact persons: R. P. Paganelli (rudi.paganelli@ieiit.cnr.it)

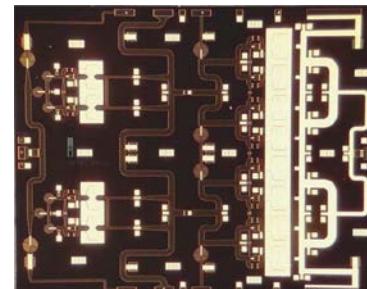

**Envelope-Tracking
Voltage-Supply
Power-DAC supply
(on top) enhances
RF-Transmitter
efficiency in
Radars and
Base-Stations**

Active Device Characterization
and Modelling

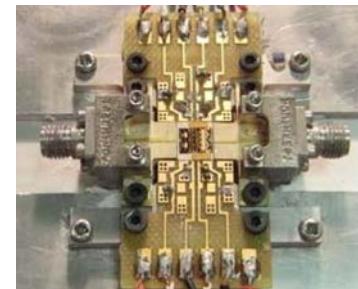

MMIC Amplifier
and Circuit Design

Resonant Wireless Power Transfer (WPT) System

Two Linear Motors work with the Energy gathered by a Resonant Coil of a [150 Watt – 6.78 MHz] WPT-Link

Circuit Assembly
and Prototyping

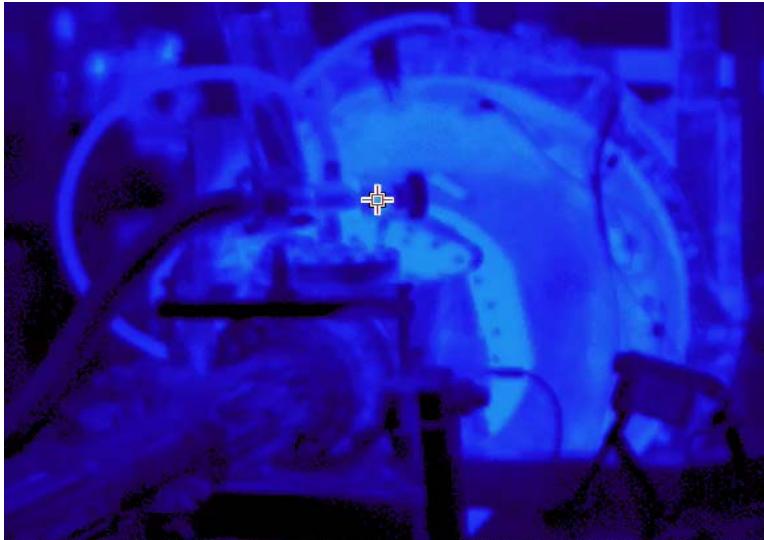

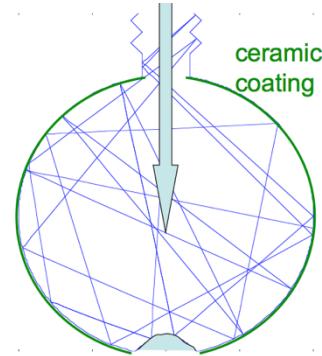

Project Area 1: Devices and Systems for ICT

Topic 2 Microwave and Millimeter-Wave Technologies and Devices

Subtopic 2.3 - RF technologies for nuclear fusion research

Contact persons: A. Simonetto (simonetto@ifp.cnr.it) and A. Bruschi (bruschi@ifp.cnr.it)

Design & tests of a 2 MW long-pulse millimeter-wave load at 170 GHz for the European Gyrotron for ITER

Design of millimeter-wave quasi-optical systems and antennas

<- IR image of the load during a 5 s.,
0.5 MW pulse at QST lab. (Naka, JP)

mm-wave lab equipped
to 220 GHz ->

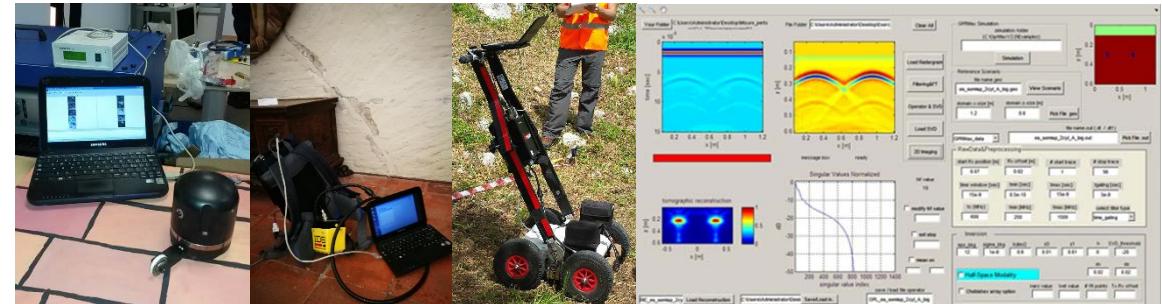

Project Area 1: Devices and Systems for ICT

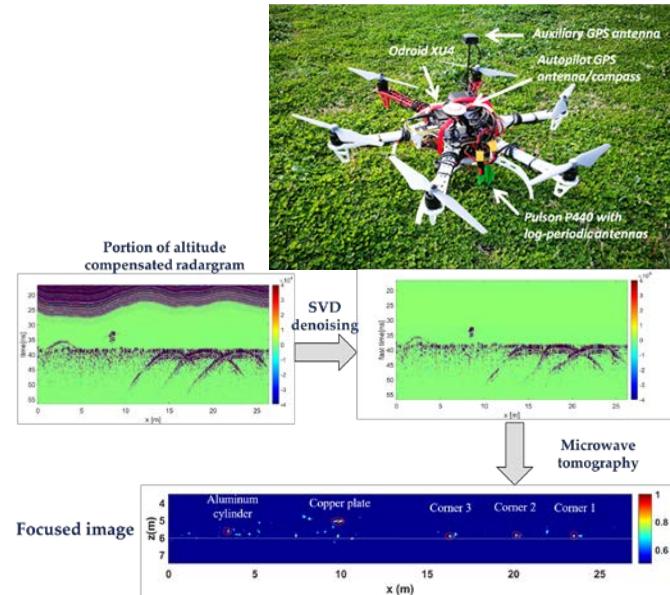

Topic 2 Microwave and Millimeter-Wave Technologies and Devices

Subtopic 2.4 Electromagnetic diagnostics systems and technologies

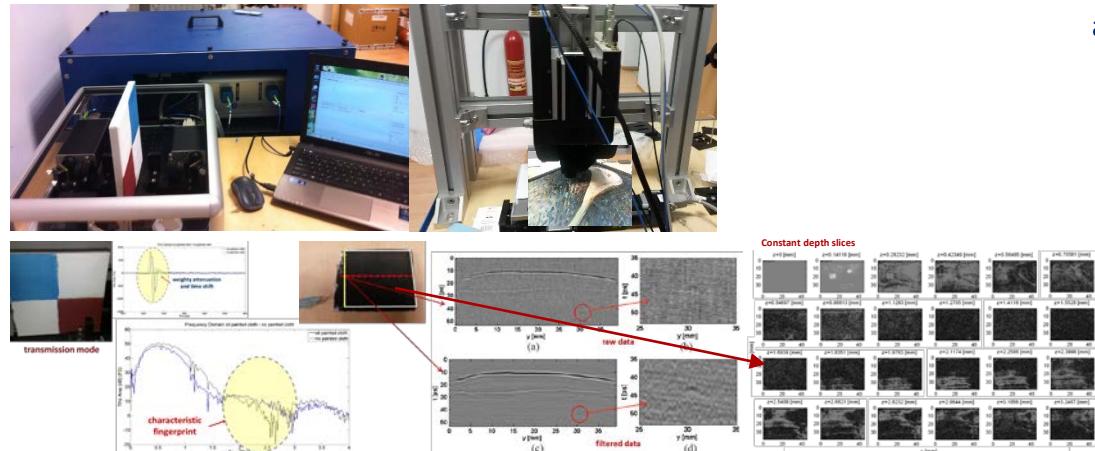

Contact Person: Ilaria Catapano (catapano.i@irea.cnr.it)

Subsurface radar equipment improved by microwave tomographic approaches for 2D and 3D imaging via user friendly interfaces

Radar imaging via novel (MIMO / forward-looking) systems and unconventional (contactless, airborne, UAV) platforms

Time domain THz system equipped with proprietary data processing strategies combining noise filters with model based approaches for spectroscopy and imaging

Radar prototypes for through the wall imaging and vital signal monitoring

Topic 3 Micro and Nano-Electronics Technologies

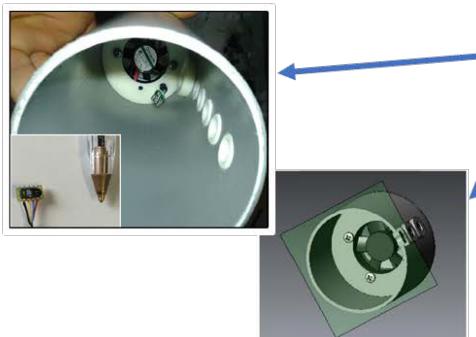

Subtopic 3.1 Hardware/software platforms for gas analysis

Contact Person: Davide Moroni (davide.moroni@isti.cnr.it)

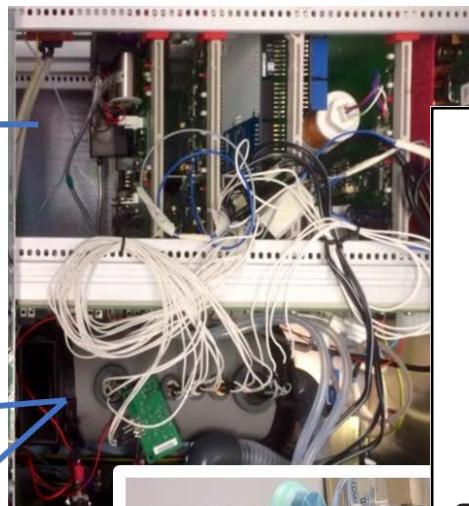

The Wize Sniffer

The sampling pump and the oxygen and carbon dioxide sensors

A Sensirion SHT11 monitors temperature and relative humidity values into the gas sampling chamber. A fan is switched on to purge the gas sampling chamber with ambient air after each breath test

Applications:

A) SEMEOTICONS <http://www.semeoticons.eu>

- <https://youtu.be/S9dpeh0bj0> (ITA)
- Contacts:
 - sara.colantonio@isti.cnr.it
 - danila.germanese@isti.cnr.it

Project Area 1: Devices and Systems for ICT

Topic 3 Micro and Nano-Electronics Technologies

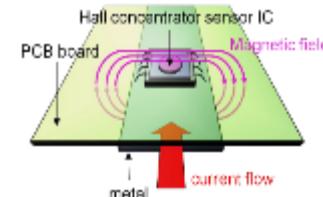

Subtopic 3.2 Si-integrated magnetic and magneto-optical sensors and devices

Contact Person: F. Albertini (franca.albertini@imem.cnr.it)

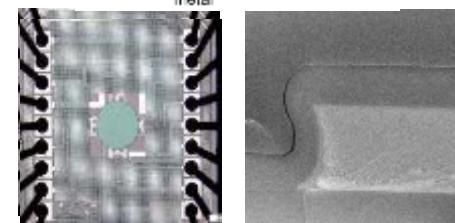

- Growth of magnetic and magneto-optical materials on Si
- Study of the interplay between growth parameters and functional properties
- Technological transfer
- Reliability tests of materials and devices

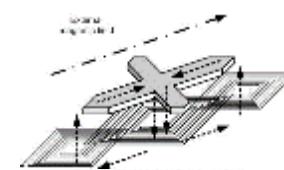

Sputtering r.f.

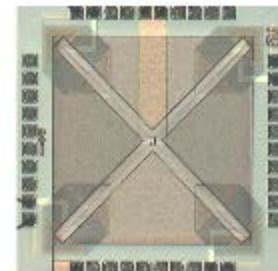

Hall current/magnetic field sensor

cross section of the magnetic concentrator

E3car-H2020 ENIAC-JU

Flux gate current/magnetic field integrated sensor

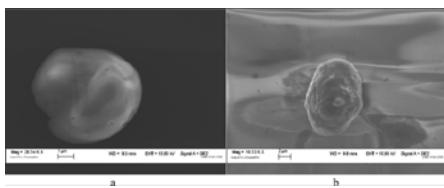

Application fields: current/magnetic field sensors, biosensors, magnetic MEMS, integrated inductors

Project Area 1: Devices and Systems for ICT

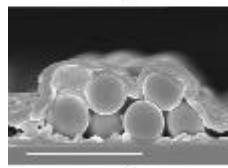

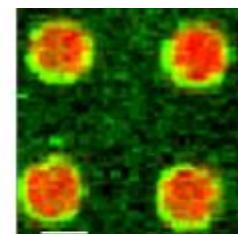

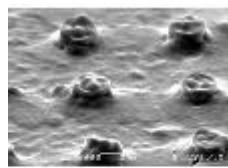

Topic 3 Micro and Nano-Electronics Technologies

Subtopic 3.3 Electronic and electrochemical devices for sensing, radiation detection, unconventional computing and bioelectronics

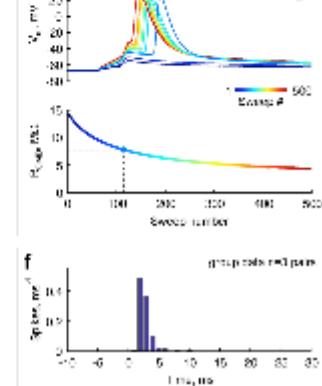

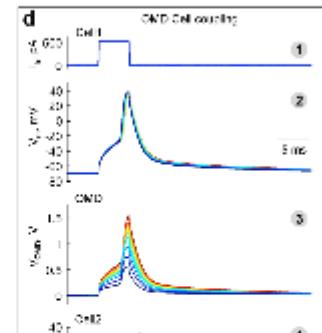

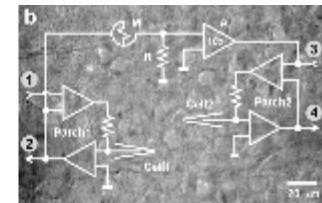

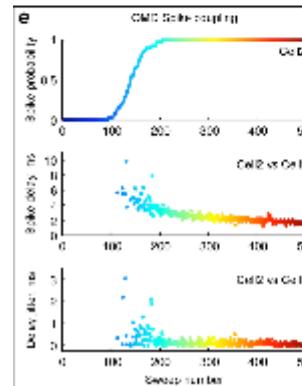

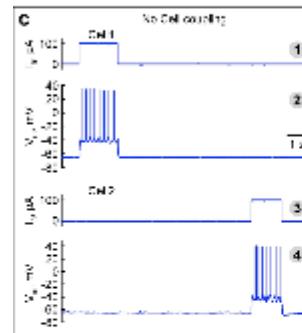

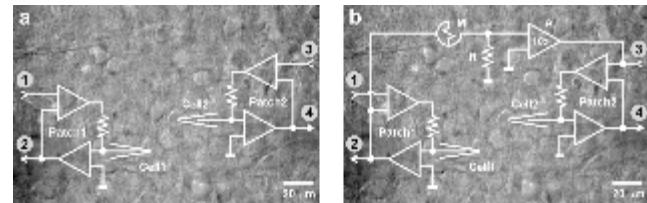

Contact Person: Victor Erokhin (victor.erokhin@fis.unipr.it)

Smart drug containers for targeted delivery and induced release

Smart drug containers for induced release

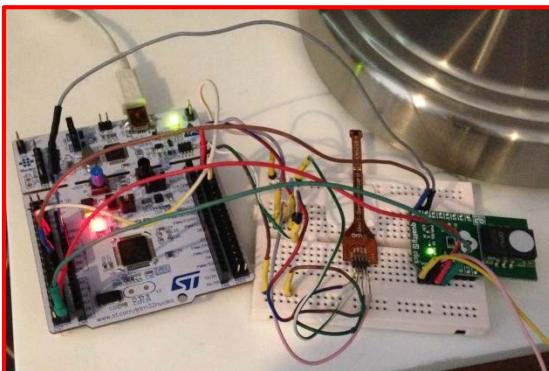

First step towards synapse prosthesis: live neuron cells are synaptically connected through organic memristive device

Project Area 1: Devices and Systems for ICT

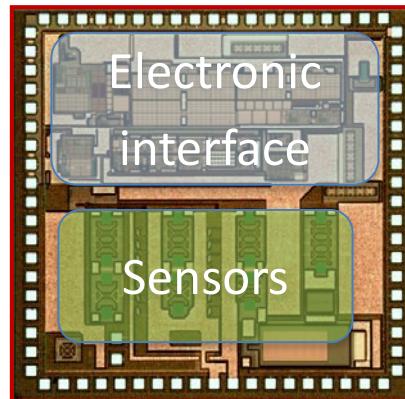

Topic 3 Micro and Nano-Electronics Technologies

Subtopic 3.4 MEMS and smart sensors based on thermal principles and micro/nano-structured materials
Contact Person: Lucanos Strambini (lucanos.strambini@ieiit.cnr.it)

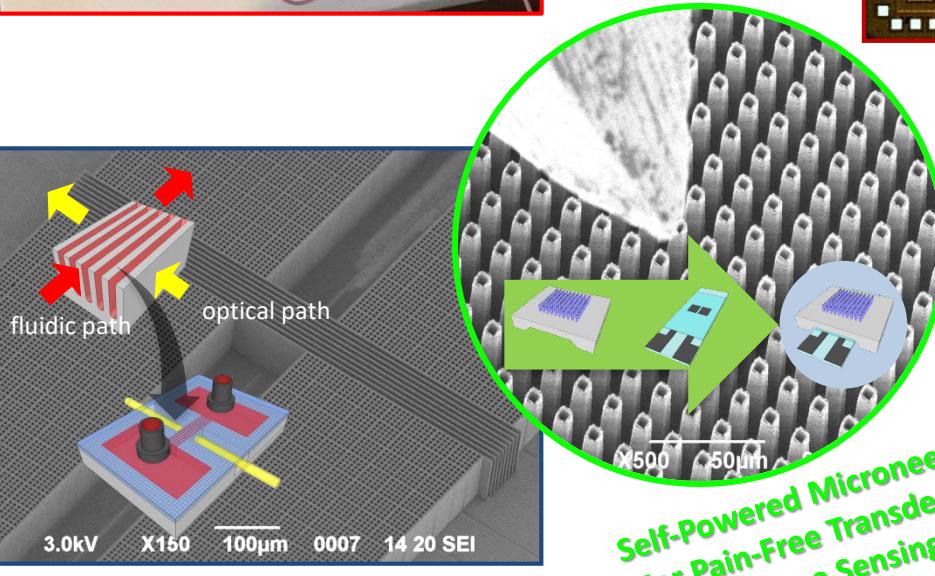

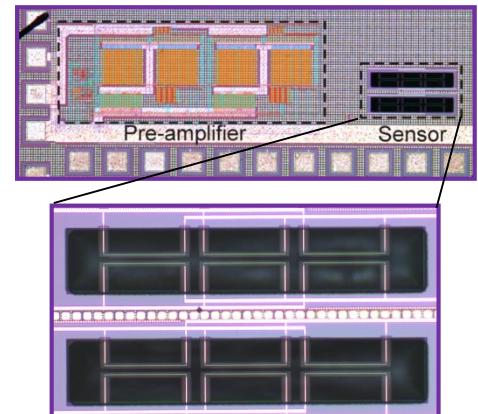

Indoor Air-Quality monitoring

Smart Air Flow Sensor

CMOS Acoustic Particle Velocity Sensor

Self-Powered Microneedles
For Pain-Free Transdermal
Glucose Sensing
